More informations about Cell Strainers (Sterile)

STARLAB Cell Strainers are intended as a fast, easy and simple alternative to traditional filtration when dissociating stem cells and other tissue-derived primary cells. They yield consistently uniform single-cell suspensions that are ideal for preparation of samples for flow cytometry, Fluorescence-Activated Cell Sorting (FACS), and other applications related to cell separation. Available in 40 µm, 70 µm, and 100 µm color-coded mesh variants. Cell strainers are made from USP Class VI materials.
