More informations about Polyolefin Sealing Film for qPCR, Self-Adhesive

OPTICALLY CLEAR SEAL WITH PRESSURE-ACTIVATED ADHESIVE

Self-adhesive plate seal with superior optical clarity and low fluorescence. The low tack-to-touch adhesive is not tacky until pressure is applied to the sealing surface, which then creates a secure seal around both the wells and the edges of the plate. The seal features end tabs with perforations for easy application and removal. Suitable for qPCR, and for dry samples such as soil, seeds or insects. Use for qPCR, long-term storage, protein crystallography and HPLC.

A roller or seal applicator is recommended for use with this seal to ensure consistent and adequate pressure.
