Cryo Cooler / Transport case

Features
• Ice-gel filled polypropylene case-style holder
• When frozen to -70°C, the Cryo Cooler will take up to 10 hours to raise to a temperature of approx -10°C
• Holds 48 x 1.5/2.0ml tubes
• Handy note panel inside lid
• Dimensions (WxDxH): 215 x 200 x 95 mm

DIRECTIONS FOR USE
Prior to use, the Cryo Cooler must be frozen to -70°C for a minimum of 24 hours.
NOTE: It can be frozen to -80°C, but extra care in handling must be taken as the plastics may become brittle at such extreme temperatures and result in damage, eg. the handle or the closure clasp snapping.

Freeze only with the lid uppermost. Ice solution is a gel and may have shifted during shipment – let the cooler stand for two hours before initial freeze.

Always wipe any condensation off the Cryo Cooler prior to placing it back in the freezer after use to avoid the formation of ice. Defrost as necessary to eliminate any ice build up.

Cleaning: Use only mild soap and water. Do not use harsh detergents or alcohol based cleaners. This product is not autoclavable.
