WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

NOTICE is used to address practices not related to personal injury.
In case of devices which have been in contact with biological substances of risk level 2, contact the STARLAB service BEFORE shipping the device. These devices have to be completely disassembled and decontaminated by the user prior to shipment.

**DO NOT return devices which have been in contact with biological substances of risk level 3 or 4.** These devices cannot be checked, maintained or repaired and even decontaminated devices must not be returned to STARLAB due to a residual risk.

The same conditions apply to on-site work.

This manual describes the decontamination of the Aspirator and the Hand Controller. **The applicability of the decontamination method and the selection of the appropriate disinfectants have to be ensured by the user.**

Ensure that work is carried out only by trained personnel. Obey local and national safety requirements. Ensure that the person is familiar with the safety procedures which relate to the products processed by the pumping system. Ensure that the device is decontaminated before repair and that you take adequate precautions to protect people from the effects of hazardous substances if contamination has occurred.

**WARNING:** Take adequate precautions to protect people from the effects of dangerous substances. Wear appropriate personal protective equipment (e.g., protective clothing, safety glasses, protective gloves) and perform work in a hood.

Prior to decontamination **isolate equipment from mains.** Allow sufficient cooling. **Ensure that the device cannot be operated accidentally.**

**Wait 5 seconds** before starting work to allow the capacitors to discharge.

Before starting check that the required parts (e.g., tools, disinfectants) are available and of the correct type. Check the operating sequence mentally on feasibility, safety requirements and consequences on safety and function of the equipment.

Obey regulations when disposing of solvents and **chemicals.**

In order to comply with law (occupational, health and safety regulations, safety at work law and regulations for environmental protection) vacuum pumps, components and measuring instruments returned to the manufacturer can be repaired only when certain procedures (see section "Repair - Maintenance - Return - Calibration") are followed.

**Scraping and waste disposal**

Dispose of the pump and any components removed from it safely in accordance with all local and national safety and environmental requirements.
Materials

To facilitate the selection of a compatible disinfectant the materials of the devices are listed.

For information about the compatibility with the materials, ask the manufacturer of the disinfectant.

Decontamination of the vacuum pump

Important information

Devices may be contaminated due to operation.

The vacuum pump of the Aspirator may be contaminated as well. The protective filter with a pore size of 0.2 µm does not safely avoid contamination of the vacuum pump in all cases.

Also, in case of a defect of the filter or operation of the Aspirator without filter, pathogenic germs (e. g., bacteria, viruses, prions, fungi) may enter the pump.

Prior to decontamination the devices have to be disassembled.

When disassembling the devices avoid contact of contaminated parts with non-contaminated parts.

Adopt suitable measures to prevent the release of dangerous, toxic, explosive, corrosive, noxious or polluting fluids, vapors and gases, and a possible contamination of personnel and environment.

Prior to decontamination clean with a damp cloth if necessary. Use water or a mild detergent as cleaning agent.

Decontaminate all disassembled parts and any tools used using an appropriate degassing method. Comply with exposure time.

The applicability of the decontamination method and the selection of the appropriate disinfectant have to be ensured by the user.

After decontamination perform an appropriate verification procedure, e. g., use contact plates in order to control disinfecting measures.

Enclose with the device an evidence of verification of the decontamination, stating the detection method.

After decontamination, return the disassembled device for repair. Ensure that all parts are packed safely.
**IMPORTANT**

Connect person to ground before coming in contact with electronic parts.

**Tools required (metric):**

- Tweezers
- Open-ended wrench SW 19
- Screw driver Torx TX20
- Tool for diaphragm change (order no.: N2400-9015)

**Disassembling the Aspirator**

1. Unscrew elbow fitting with silencer at the outlet of the pump.
2. Depending on Aspirator version, remove connection tubing at the hose nozzle or detach quick coupling.
3. Remove bottle from support.
4. Dismantle bottle into individual components.
Unscrew hose nozzle, or hose nozzle with coupling, using an open-ended wrench.

Unscrew cover, paying attention to washers.

Remove the cover of the housing cover.
View of the disassembled pump head parts

1: Cover of housing cover
2: Housing cover
3: Housing cover insert
4: Valves
5: Head cover
6: Guiding pin
7: Diaphragm clamping disc with square head screw
8: Diaphragm
9: Diaphragm support disc
10: Washers
11: Rod
12: Housing
⇒ Unscrew four screws at the pump head, paying attention to washers. Remove housing cover.

⇒ Unscrew union nut and remove hose from elbow fitting.
⇒ Remove housing cover insert with elbow fitting.

⇒ Note position of valves.

⇒ Remove head cover and valves.
➡️ Never remove parts by using a pointed or sharp-edged tool (e.g., screw driver), we recommend to use a rubber mallet or compressed air (to be blown carefully into port).

⇒ Lift diaphragm carefully sidewise.
➡️ Never use a pointed or sharp-edged tool to lift the diaphragm.

⇒ Use the diaphragm key to grip the diaphragm support disc below the diaphragm.
⇒ Press down the diaphragm clamping disc to bring the diaphragm to its lowest oscillating position. Unscrew diaphragm support disc with diaphragm and diaphragm clamping disc.
➡️ If the diaphragm is difficult to separate from the diaphragm support disc, immerse assembly in naphtha or petroleum ether. Do not inhale vapors!
Lay down the Aspirator as shown.
Unscrew screws at the base plate.

Slide the base plate to the side.

IMPORTANT

Connect person to ground before coming in contact with electronic parts.

Remove earth cables.

Remove hose from pressure sensor using tweezers.

Remove sensor hose and dismantled into individual components.
Disassembling the Hand Controller

1. Select continuous aspiration.

2. Turn cap (1) and remove (2).

3. Pull adapter with hose out of the Hand Controller.

4. Remove adapter from hose.

5. Pull aspiration hose out of the handle.
NOTICE
It is not possible to disassemble the Hand Controller completely.

IMPORTANT
Do not return the aspiration hose.
Every employer (user) is held responsible for the health and safety of their employees. This also applies to service personnel performing repair, maintenance or return.

The **health and safety clearance form** informs the contractor about any possible contamination of the device and forms the basis for the risk assessment. **In case of devices which have been in contact with biological substances of risk level 2** contact the STARLAB service BEFORE dispatching the device. These devices have to be completely disassembled and decontaminated by the user prior to shipment. **Do not return devices which have been in contact with biological substances of risk level 3 or 4.** These devices cannot be checked, maintained or repaired and even decontaminated devices must not be returned to STARLAB due to a residual risk. The same conditions apply to on-site work.

**No repair, maintenance or return is possible unless a correctly completed health and safety clearance form is returned. Devices sent without a completed form will be rejected.** Send a completed copy of the **health and safety clearance form to us in advance.** The declaration must arrive before the equipment. Enclose a second completed copy with the product.

Remove all components from the device that are not original STARLAB components. STARLAB will not be responsible for lost or damaged components that are not original components.

**Drain the device completely of fluids and residues. Decontaminate the device.** Close all openings airtight especially if using substances hazardous to health.

To expedite repair and to reduce costs, please enclose a detailed description of the problem and the product’s operating conditions with every product returned. If you do not wish a repair on the basis of our **quotation**, the device may be returned to you disassembled and at your expense.

In many cases, the components must be cleaned in the factory prior to repair. For cleaning we use an environmentally friendly water based process. Unfortunately the combination of elevated temperature, cleaning agent, ultrasonic treatment and mechanical stress (from pressurised water) may result in damage to the paint. Please mark on the health and safety clearance form if you would like a repaint (at your expense) in case such damage should occur. We will also replace parts for cosmetic reasons at your request (and at your expense).

**Before returning the device**

Pack the device properly, if necessary, please order original packaging materials at your costs.

Mark the package completely

**Securely attach the completed health and safety clearance form to the outside of the carton.**

Notify the carrier of any possible contamination if required.

**Scraping and waste disposal**

Dispose of the equipment and any components removed from it safely in accordance with all local and national safety and environmental requirements. Particular care must be taken with components and waste oil which have been contaminated with dangerous substances from your processes. Do not incinerate fluoroelastomer seals and O-rings. You may authorize us to dispose of the equipment at **your expense**. Otherwise we return the device at your expense.
Health and safety clearance form

1. Device (Model): .................................................................................................................................

2. Serial no.: ............................................................................................................................................

3. Reason for return / malfunction: ........................................................................................................

4. Has the device been used in a copper process step (e.g., semiconductor production): ☐ yes ☐ no

5. Substances (gases, liquids, solids, biological material, e. g. bacteria, viruses) in contact with the device /
   which have been pumped:
   ............................................................................................................................................................
   ............................................................................................................................................................
   ............................................................................................................................................................
   ............................................................................................................................................................

6. Risk level of the used biological material: ☐ none ☐ 1 ☐ 2* ☐ 3** ☐ 4**
   * Contact the STARLAB service BEFORE dispatching the device.
   ** Devices which have been in contact with biological substances of risk level 3 or 4 cannot be checked, main-
   tained or repaired and even decontaminated devices must not be returned to STARLAB due to a residual risk.

7. Radioactive contamination: ☐ yes ☐ no

8. I confirm that the device has been decontaminated: ☐ yes ☐ no
   Description of the decontamination method and the test / verification procedure:
   .............................................................................................................................................................
   .............................................................................................................................................................

9. All parts of the device are free of hazardous, harmful substances: ☐ yes ☐ no

10. Protective measures required for service staff:
    ............................................................................................................................................................

11. If the paint is damaged, we wish a repaint or a replacement of parts for reason of appearance
    (repaint and replacement at customer’s expense): ☐ yes ☐ no

12. Legally binding declaration
    We assure for the returned device that all substances, which have been in contact with the device are listed in
    section 5 and that the information is complete and that we have not withheld any information. We declare that
    all measures (where applicable) have been taken as listed in section “Repair - Maintenance - Return”. By our
    signature below, we acknowledge that we accept liability for any damage caused by providing incomplete or
    incorrect information and that we shall indemnify STARLAB from any claims as regards damages from third
    parties. We are aware that as expressed in § 823 BGB (Public Law Code of Germany) we are directly liable for
    injuries or damages suffered by third parties, particularly STARLAB employees occupied with handling/repairing
    the product. Shipping of the device has/will be undertaken according to regulations.

   Name: .................................................................. Signature: .................................................................
   Job title: ............................................................. Company’s seal:
   Date: ........................................................................

Release for repair grant by STARLAB (date / signature):
Protective measures: ☐ Protective gloves, safety goggles ☐ Hood ☐ External cleaning
